Time: From 8:30AM to 4:30PM (lunch is provided)

CONTENT:

This 1 full day (8 hours) technical session will cover the following topics:

- › How to size an actuator based on damper torque requirements
- › The differences between fail safe and non-fail safe actuators
- › The control signals commonly used today in commercial HVAC
- › How to mount and wire fail safe and non-fail safe actuators
- › Basic troubleshooting on mounting and wiring of Belimo actuators
- › The programming options with Multi Function Technology (MFT)
- › The key differences between 2-way, 3-way and 6-way valves
- › The difference between mixing and diverting valves
- › How to calculate the required Cv rating for a valve
- › What the different valve flow characteristics mean
- › How the pressure independent valve (PICCV & ePIV) works
- › How the Energy Valve works including data collection and analysis

Training location:

3780 14th Ave – Unit 106 Markham ON, L3R 9Y5
